## **State Data Center Program**

The State Data Center Program was established in 1978 by the U.S. Census Bureau to make statistical information and technical services more readily available to the public. The program now includes all states in the U.S., the District of Columbia, Puerto Rico, Guam, and the Virgin Islands. The Census Bureau provides data products, training, technical assistance, and consultation to data centers and their affiliate agencies, which then offer products and assistance to local data users such as community leaders, planners, businesses, researchers, and the general public.

## **Massachusetts State Data Center Program (MSDCP)**

The Massachusetts State Data Center Program (MSDCP) is comprised of a lead agency and 49 affiliate agencies throughout the state. These agencies have an extensive collection of census data on population, housing, education, business, manufacturing, trade, services, government, and agriculture in Massachusetts, New England, and the U.S. This includes both printed and computerized data from:

Censuses of Population and Housing  
Current Population Surveys  
County Business Patterns

Economic Censuses  
Census of Governments  
Census of Agriculture

The MSDCP network provides data and technical assistance for over 100,000 requests each year. In addition to census data, these agencies have many other resources which are summarized in this directory.

## **Massachusetts State Data Center Program Lead Agency**

The Massachusetts Institute for Social and Economic Research (MISER) is the lead agency for the State Data Center Program in Massachusetts. The lead agency is responsible for coordinating Data Center Program activities throughout the state. The MISER State Data Center is also the lead agency for the Census Bureau's Business and Industry Data Center (BIDC) Program, which provides more extensive economic information on manufacturing, construction, retail and wholesale trade, finance, exports, transportation, and communications.

Founded in 1981, MISER is an interdisciplinary research institute of the College of Social and Behavioral Sciences at the University of Massachusetts in Amherst. MISER is actively involved in research pertaining to social and economic issues, and has in its holdings a wide range of data from federal and state agencies, including the U.S. Bureau of Economic Analysis, the U.S. Bureau of Labor Statistics, and the Massachusetts Department of Employment and Training. MISER is internationally known for its research on foreign trade data, and is the only non-Federal contributor to the National Trade Data Bank (NTDB). In addition, MISER distributes population estimates and projections for the state, its counties, cities and towns as part of the Federal and State Cooperative Programs for Population Estimates (FSCPE) and Projections (FSCPP).

## MISER STATE DATA CENTER

Quarterly newsletter

## **The Massachusetts State Data Center Affiliate Program**

The State Data Center Affiliate Program is an extension activity of the Massachusetts State Data Center. Through this program, the Data Center can expand its efforts to help the public access and use demographic and economic information from the Census Bureau. Affiliates are an important link between the State Data Center Program and the majority of individual data users.

The Massachusetts State Data Center Program currently has 49 affiliates throughout the state. These include regional planning agencies, libraries, state agencies, and business and economic development agencies. Affiliates provide data and services to their local communities making information more accessible to everyone.

There are two components of the Massachusetts State Data Center Affiliate Program. The State Data Center (SDC) affiliate and the Business-Industry Data Center (BIDC) affiliate. SDC affiliates are the backbone of our program providing assistance to their communities in locating and using census data. They offer a publicly accessible library of demographic and economic data, as well as providing referral services and products of their own. The BIDC program was designed to meet the growing need by public and private sector decision-makers for more extensive economic information. BIDC affiliates have the additional responsibility of identifying and developing new data uses and methods of assistance to their communities, especially to the business community and agencies that engage in economic development activities.

### **Affiliate Program Objectives**

The purpose of the Massachusetts State Data Center Affiliate Program is to expand access and use of population and economic data by state and local governments, businesses, academic communities and other interested users. The Massachusetts State Data Center Affiliate Program is designed with these objectives:

- 1) Expand the amount or types of statistical data that are available within the state.
- 2) Increase the flow of decision-making information to the business community and to the institutions of government and academia that engage in research, administration, planning and policy development activities.
- 3) Develop a coherent network of providers of population and economic data, training and technical assistance to private and public sector decision makers.

## Massachusetts State Data Center Program Affiliate Activities

Every MSDCP Affiliate is expected to carry out basic activities related to providing data and information services. These include at a minimum:...

- 1) Maintaining as a public library the basic affiliate collection of Census Bureau and State Data Center data products and reference materials.
- 2) Handling inquiries regarding economic and demographic statistics.
- 3) Informing present or potential data users (and other Affiliates) of available data, services and research activities.
- 4) Becoming aware of the data resources of the MSDCP and other MSDCP Affiliates.
- 5) Providing the MSDCP listings of publications or products produced by your office which utilize Census data.
- 6) Referring potential users to other data sources when appropriate.
- 7) Attending at least one MSDCP Affiliate statewide meeting every two years.
- 8) Furnishing annual reports (form provided by the MSDCP), including:
  - Number of inquiries handled.
  - Types of users served by broad categories.
  - Examples of practical applications of data.
  - Unmet data needs and specific problems with individual data products.

## MSDCP Affiliate Publication Collection

### U.S. Bureau of the Census Products

The following is a list of publications which will be supplied to MSDCP affiliate agencies by the U.S. Bureau of the Census. The publications listed will be supplied in printed report format.

Some Census Bureau products are not available in print format. These include the Summary Tape File products (STF1, STF3, STF4). These products can be obtained from the Massachusetts State Data Center lead agency.

*(Unless otherwise noted, publications provided to MSDCP affiliates are only those containing data for the state of Massachusetts.)*

### Decennial Census Reports

- A. Summary Population and Housing Characteristics (CPH-1)
- B. Population and Housing Unit Counts (CPH-2)
- C. Population and Housing Characteristics for Census Tracts and Block Numbering Areas (CPH-3)
- D. Population and Housing Characteristics for Congressional Districts of the 103rd Congress (CPH-4)
- E. Summary Social, Economic, and Housing Characteristics (CPH-5)
- F. General Population Characteristics (CP-1)
- G. Social and Economic Characteristics (CP-2)
- H. General Housing Characteristics (CH-1)
- I. Detailed Housing Characteristics (CH-2)

### Census of Agriculture

#### Geographic Area Series Reports
